Great Wildebeest Migration

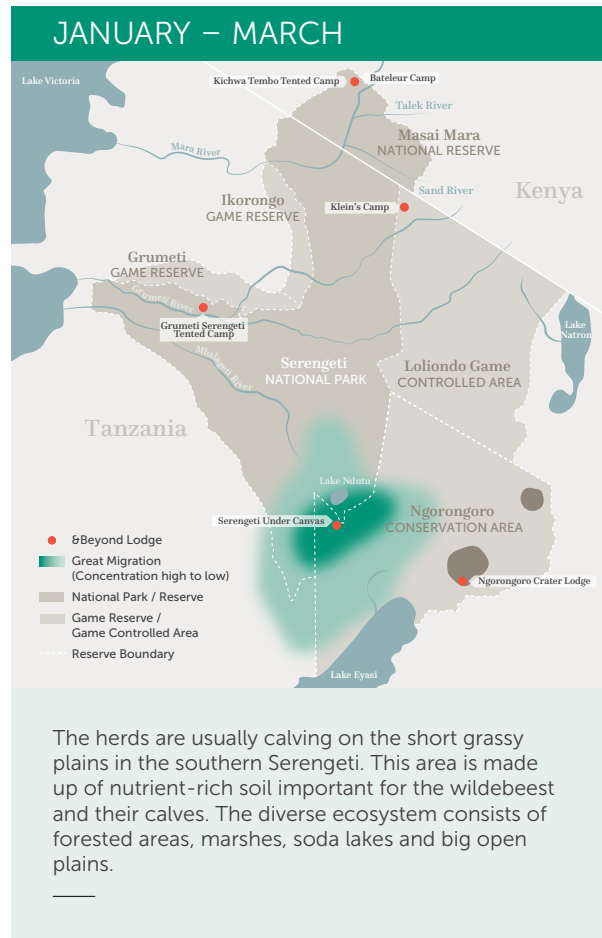

1 ONE OF THE 7 NATURAL WONDERS OF THE WORLD
 Considered the most thrilling spectacle in the animal kingdom, this epic journey migrates from Tanzania's Serengeti to Kenya's Masai Mara.

2 THE WORLD'S LARGEST OVERLAND MAMMAL MIGRATION
 The annual movement of wildebeest and other herbivores across the Serengeti-Mara ecosystem consists of more than 1.5 million wildebeest, 500 000 zebra, 200 000 Thompson's gazelle and 18 000 eland.

3 THE ANIMALS MIGRATE OVER 800 KM (500 MI)
 Due to the sheer size of the herd, the animals have to move to be able to survive. The herds generally follow the rain, as where there is rain, there is fresh grass. Once grass is depleted in one area, they will move on to a grassy area.

It's estimated 500 000 wildebeest calves are born annually. ”

The annual movement of wildebeest and other herbivores across the Serengeti-Mara ecosystem is rarely the same in terms of precise timing and direction.

Splinter herds usually congregate in the western corridor before moving north. Depending on the season and amount of rain, these large masses of animals can be seen from Beyond Grumeti Serengeti River Lodge, crossing the Grumeti River towards the northern Serengeti.

JULY – OCTOBER

The big herds congregate in northern Serengeti and the Masai Mara. Following the rain, the herds cross over to the Masai Mara and then often return to the Serengeti. This continues for a number of months. There are over 10 common river crossing points where this takes place.

NOVEMBER – DECEMBER

The migration herds are on the move again making their way past Grumeti or straight down to the central Serengeti. Often breaking away, they may even move south via the eastern, western and central Serengeti. The herds all move at different paces with many going through the Lobo area towards the southern plains.
