

TEREMOK LODGE & SPA GOES GREEN

Teremok Lodge & Spa has gone green! In October 2023, Teremok embarked on an alternative power supply project which has resulted in us operating largely off the electricity grid, and onto a green loadshedding solution. The project has seen the installation of 36 solar panels that will feed into the establishment's power supply, with back-up power provided by an inverter and battery (charged by the solar panels) set-up.

The lodge and spa will now remain fully operational during power outages and loadshedding, with only certain high-draw items being unavailable on the back-up power supply. Although this will include airconditioning units, ceiling fans in the rooms will continue to operate during loadshedding times. Lights, plugs and wifi will continue to work during outages.

The installation of this alternative power supply, along with the well on the property (installed in 2014 and providing pure, filtered water for the full running of the establishment), ensure green solutions for uninterrupted power and water supplies for the comfort and convenience of our guests and clients.
