Climate

The Emerald Season (January–March) is a time of regrowth, with breeding birds, newborn wildlife, and mostly nighttime rainfall. April and May bring clear, warm days, occasional storms, lush green grass, and migrating birds departing. June to August is the dry winter season with cool nights, warm days, and easier game viewing as the grass dies back. From September to December, temperatures rise, rains begin, new growth emerges, and newborn animals appear, accompanied by brief insect bursts and humid conditions.
